The two main objective criteria are content and language. The general thesis is maintained that objective criteria tell us much less and with less certainty than is normally assumed.

Palmer, L. R., New light on the Greek Bronze Age, The Listener 64 (1960) 725-726.

"... the question to be decided is a simple one. With what kind of pottery were the Linear B tablets of Knossos found associated? The primary data of archaeology are of this kind. What was found where, with what? Such simple concrete facts can be decided only from the records. Those we are going to publish so that scholars can judge for themselves."

Boardman, J., Letter, New light on the Greek Bronze Age, The Listener 64 (1960) 797.

"By all means let us wait for the world to judge the whole evidence, properly assembled, but let us now wait in silence."

(I prefer not to include here a summary of the arguments adduced by Palmer and Boardman on the dating of the tablets from Knossos. In quoting these extracts out of context I intend no misrepresentation; rather an expression of approval of this point on which they seem to agree. Further letters to The Listener, in issues which have not yet reached Madison, added to this series of exchanges. ELB)
